PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 3.5+ years of experience building scalable enterprise applications using Java, Spring Boot, Hibernate, and Microservices architecture. Skilled in REST API development, SQL query optimization, asynchronous processing, and backend performance tuning. Experienced in developing inventory management systems, warehouse workflows, invoicing engines, and high-concurrency transactional applications using MySQL and Elasticsearch.

EXPERIENCE

Mobioffice Software Innovation Pvt. Ltd.

Oct 2022 – Present

Java Backend Developer

Surat, Gujarat

- Developed scalable backend applications using Java, Spring Boot, Hibernate, and Microservices architecture for enterprise inventory and manufacturing workflows.
- Designed and implemented REST APIs for inventory tracking, warehouse management, invoicing, and transactional workflows.
- Worked on inventory lifecycle management including GRN, Issue, Return, Internal Transfers, and warehouse stock movement tracking.
- Contributed to Invoice Config V2 development supporting dynamic pricing logic and transaction-specific rate management.
- Developed centralized rate management modules for Delivery Challans (DC), Packing Lists, and Memo systems.
- Built real-time warehouse and Godown stock tracking systems with historical audit and reporting functionality.
- Optimized complex SQL queries, Hibernate mappings, and resolved N+1 query bottlenecks improving report generation performance by 40%.
- Integrated third-party APIs and automated external data synchronization workflows.
- Developed downloadable PDF reporting modules and high-performance backend services for large transactional datasets.
- Worked extensively with MySQL including stored procedures, triggers, functions, indexing, and query optimization.

PROJECTS

Asset Management & Warehouse System | *Java, Spring Boot, Angular, Hibernate, MySQL*

- Engineered warehouse management workflows handling GRN, Issue-to-Production, Material Returns, and Inter-Warehouse Transfers.
- Developed a Live Stock Dashboard providing real-time inventory visibility across multiple storage locations.
- Implemented transaction auditing systems to track asset movement from procurement to disposal.
- Built scalable REST APIs and analytical reporting modules for operational workflows.

KPS - Manufacturing Execution System (MES) | *Java, Spring Boot Microservices, Hibernate, MySQL*

- Developed backend modules managing the complete manufacturing lifecycle from Briefing to Finished Goods production.
- Engineered inventory tracking systems ensuring accurate material traceability across production stages.
- Worked on Metal Loss calculation workflows and artisan-level inventory tracking systems.
- Optimized backend processing and database performance for high-volume transactional operations.

Lattice Web Application | *Java, Spring Boot, Angular, Elasticsearch*

- Developed circular inventory workflows with Return-to-Inward (RTI) inventory management logic.
- Integrated NY Rapaport pricing and IGI/HRD Lab details for automated valuation and certification tracking.
- Improved Elasticsearch indexing and query optimization for faster inventory search and retrieval.
- Built scalable backend APIs and business logic modules for inventory operations.

EDUCATION

Masai School, Bengaluru

2021 – 2022

Full Stack Web Development Certification

HIMT College of Pharmacy

2017 – 2022

Bachelor of Science (Biotech)

Uttar Pradesh

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL

Backend Technologies: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, JWT Authentication, Maven, J2EE

Database & Search: MySQL, Elasticsearch, SQL Query Optimization, Stored Procedures, Triggers, Functions, Indexing

Frontend Technologies: Angular, HTML5, CSS3, JavaScript, TypeScript

Developer Tools: Git, GitHub, Postman, Docker, IntelliJ IDEA, VS Code, Linux

Architecture & Optimization: Microservices Architecture, Hibernate Performance Tuning, Async Processing, Query Optimization, Report Optimization, Transaction Management

Core Concepts: Data Structures & Algorithms (DSA), OOP, Exception Handling, CRUD Operations, API Integration
